Experience

MedBridge
Software Engineer II • October 2021 – Present
I work with my team & others to develop & maintain various products, spanning multiple services & technologies, including maintaining legacy PHP software, developing new services in Go, integrating with external APIs, making services scalable with Kafka & ElasticSearch, managing containerized pods with Docker & Kubernetes, etc.

Stratozen / ConnectWise
Software Developer • April 2020 – October 2021
Created & maintained multiple critical web applications including critical internal software, client-facing analytics, data reporting scripts, and more. StratoZen was acquired by ConnectWise in January 2021.

Pippin Design
Web Developer • May 2016 – April 2020
At this design firm, I created on dozens of web solutions for clients. Their needs varied from simple marketing pages, to ecommerce shops, to full web applications such as job boards, user content portals, and cabin rental. Most websites were developed in WordPress, with some developed in Laravel or other softwares.

Koz, Inc.
Web Developer • March 2019 – November 2019
I maintained several client-facing web apps, all of which had local user login systems & integrated with external APIs like Facebook, Twilio, and more.

FanZoos
Junior Web Developer • October 2015 – May 2016
This startup needed a Phase 1 web application, mainly focused on driving user engagement & signups. As the sole developer on the project, I created a user login system (both local & SSO), an admin analytics dashboard, and a user content uploading system.
